MOUNTAIN PLUMBING TO MOEN FINISH PAIRINGS

- Polished Chrome = Moen chrome
- Brushed stainless= Spot resistant Stainless
- Matte black = Moen Matte Black
- Oil Rubbed Bronze= Moen Oil rubbed Bronze
- Champagne bronze = Moen Bronzed gold
- Satin Gold= Moen Brushed Gold

16.3 PLUMBING- UPGRADE - REVERSE OSMOSIS FILTRATION

HOW IT WORKS:

- Reverse Osmosis (RO) is the finest filtration available. The RO process works by separating contaminants from water by forcing the water through a semi-permeable membrane. This membrane acts as a physical barrier to almost all molecules with a molecular weight greater than 0.0001
- After filtering out all contaminates and minerals; healthy minerals such as Calcium and magnesium are added back in with an alkaline mineral water system to create a balanced PH water product.

FILTERS OUT:

Filters out up to 98% of all unwanted Contaminants. Removes, Filters and Reduces impurities down to 0.0001 microns, such as:

- Micro plastics
- PFAS/ PFOS/ PFOA
- Forever chemicals
- Pharmaceuticals
- Pesticides & Herbicides
- Hex Chrome
- Fluoride
- Arsenic
- Heavy metals
- Endocrine disruptors
- Chlorine
- Nitrates
- Highly effective at removing volatile organic compounds (VOCs), MTBE, and PCBs from drinking water

MAINTENANCE:

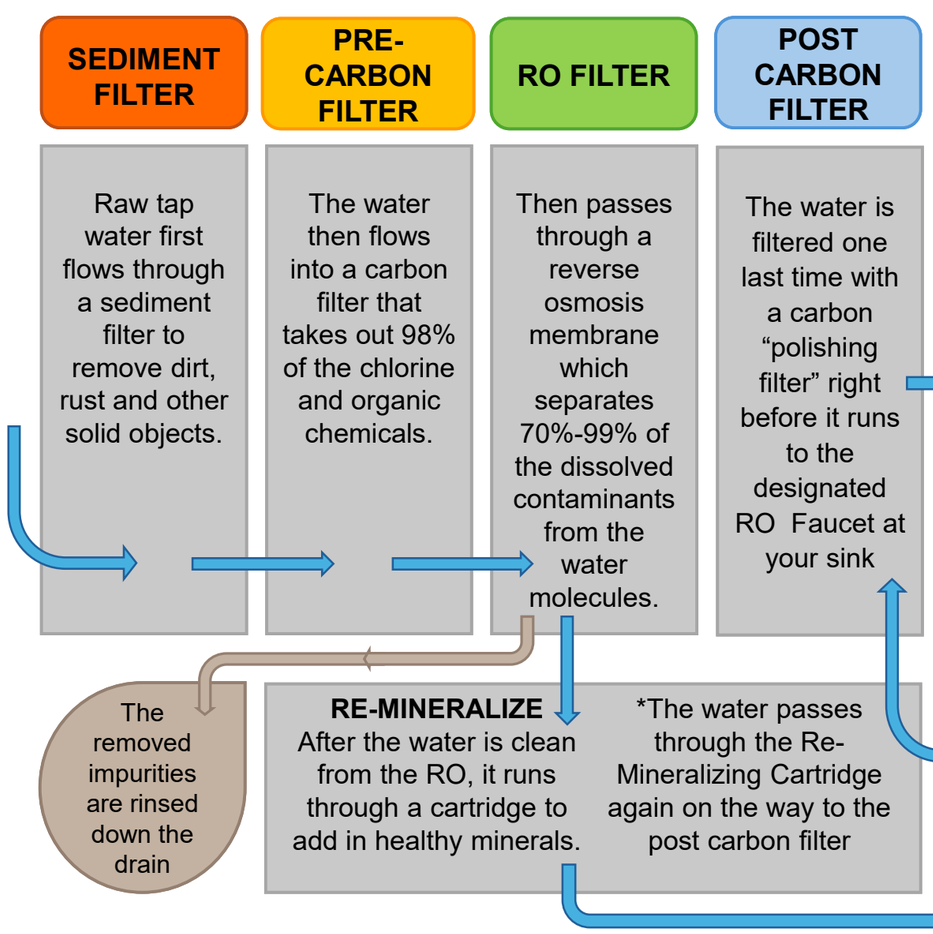

- Filter replacement every year
- AMC- (alkaline mineral cartridge) Remineralization cartridge replacement every 2-3 years
- Annual filter & equipment service costs appx $400-$450

PROS:

- Best way to remove microplastics
- Produces the cleanest water of all the water filtration options.
- Large storage tank for water-on-demand.
- Does not need a power source
- Improves coffee and tea flavors
- Remineralization cartridge Provides alkaline water with a balanced pH, adds natural ionic minerals including Calcium & magnesium
- Can be added to supply the refrigerator water source for cleaner ice and water.

CONS:

- Overall added costs
- (RO) membranes are designed to filter out contaminants at the molecular level.
- If on a well water system, advised to have Whole House Carbon filter to prevent fouling and clogging of your RO cartridge system.
- If the reservoir tank is depleted, the refill process is relatively slow, requires a storage tank and time to process (appx 1gallon per hour)
- Some water waste- RO process unit uses water to clean itself and wash away impurities. The dirty waste-water is flushed down the drain. Appx equivalent to an extra toilet flush per day.

UPGRADE-

ADDED COSTS:
$2,375- includes materials, installation, and first year of replacement filters
** Does not include RO faucet options- see other page for added cost info.

16.3 PLUMBING– WHOLE HOUSE CARBON FILTER

HOW IT WORKS:

As water flows through the carbon filter, contaminants are drawn into the activated carbon's pores, it is an extremely porous material that attracts and holds a wide range of harmful contaminants.

This filter is placed at the main water supply where it enters the home.

FILTERS OUT : Particles down to 5 Microns

- Chlorine
- Chloramines
- Ammonia
- Thihalomethanes (THM's)
- Sand/particles filters
- Dirt/sediments filters
- Iron/Rust Removal
- Tastes and Odor
- Forever Chemicals PFAS group of synthetic compounds (PFOA/PFOS)
- Radon
- Pesticides & Herbicides
- Highly effective at removing volatile organic compounds (VOCs), MTBE, and PCBs from drinking water

MAINTENANCE:

- Filter replacement every year
- Annual filter replacement service costs appx $250- $300

PROS:

- Cleaner water for your health
- The taste and odor of the purified water is improved
- Cleaner water for the all water using appliance in the home even hose bibs
- Reasonably small footprint on wall area
- Can help with skin sensitivities
- Does not require electricity

CONS:

- Overall added costs
- Filtration has limitations on particle size contaminate reduction- see RO for advanced filtration

16.3 PLUMBING– WATER SOFTENING SYSTEM WITH CARBON FILTER

HOW IT WORKS:

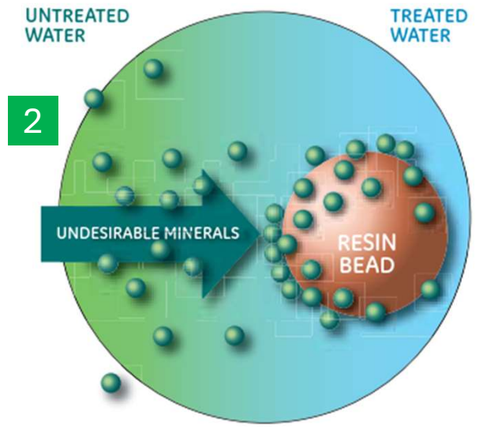

1. Untreated water containing impurities passes through a bed of extremely small resin beads.
2. Undesirable minerals are drawn to the resin beads and attach to the surface.
3. Virtually all unwanted minerals are removed when the water reaches the bottom of the tank.
4. The treated water passes up through the riser tube and is distributed throughout the house.
5. Regenerant from the brine tank is used to recharge the resin beads.

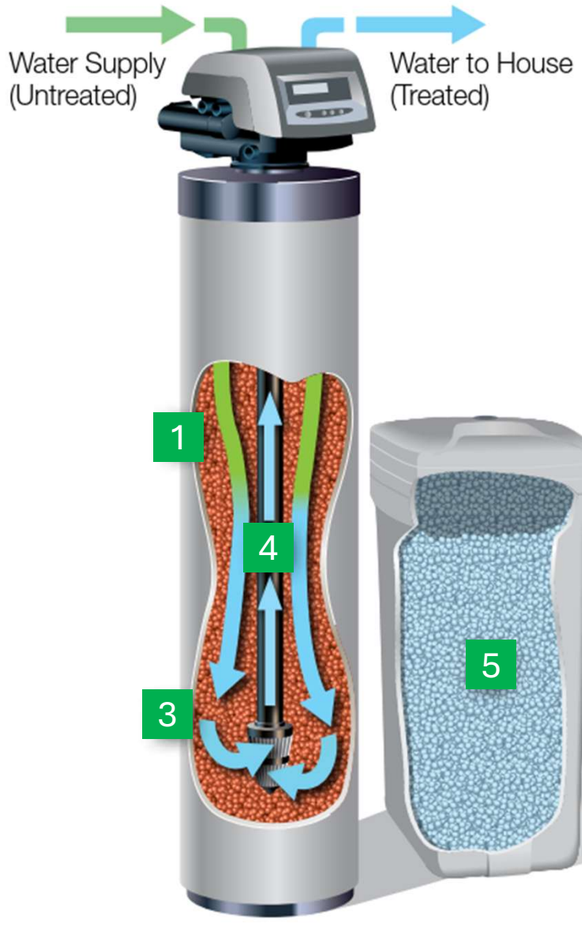

FILTERS OUT AND REDUCES HARD WATER MINERALS:

- Ferrous Iron
- Ferrous bicarbonate [FeHC03)2]
- Calcium carbonate equivalent,
- Magnesium
- Manganese

MAINTENANCE:

- Salt refills appx every 6 months depending on usage
- Filter replacement every year
- Annual filter and equipment service costs appx $350-$450

PROS:

- Reduces cleaning for hard water mineral deposit build up.
- Water using appliances (IE Dishwasher, water heater, washing machine) will last longer and work more efficiently.
- Increase water heater efficiency
- Cleaner dishes and glassware
- Helps prevent scale build up
- Hair and skin will feel noticeably cleaner, softer and not so dry
- Clothes will be softer, cleaner, whiter and brighter, and last longer.
- The kids will love the extra bubbles in the tub
- Memory back-up retains settings during power outages.
- Only regenerates (cleaning cycle) when needed - saves time, energy, money and conserves resources
- A fully digital electronic controller.

CONS:

- The water can feel silky for the first few months of usage- will dissipate after your body gets accustomed to the water.
- Space required in garage or Mechanical closet for salt brine storage & tank. Appx 24”w x 24”d x 80” ht
- Overall Added costs

16.3 PLUMBING– FLO BY MOEN LEAK PREVENTION- WATER SHUT OFF AND MONITORING

HOW IT WORKS:

- The Flo by Moen device is connected to your domestic waterline near the main house shutoff. Using FloSense Technology, the device learns your home's water usage patterns to identify abnormalities. Even as small as a drop per minute. Additionally, it can automatically shut off the water to prevent minor leaks from turning into major problems.
- Monitoring for potential issues to avoid possible water damage.
- It will send you notifications via an app, phone call or email alerts for potential leaks whether you're at home or away.

MAINTENANCE/ SERVICE:

- On boarding the system takes 7-10- days for device to learn your home water habits. After that the device should be hands off until an Alert is made.

PROS

- Conserve water- the system can reduce up to 90% of potential household water waste and provide possible savings on your monthly bill by identifying and stopping leaks.
- Every day the system runs a health test during a time of low usage (nighttime while you sleep) to monitor pressure and detect anomalies.
- You can customize the sensitivity of the system- if you are on vacation or on creating known irregular water usage like washing a car, extra house guests, or filling a pool. The more interactive you are with the system the more it will learn your habits and have less unnecessary alerts.
- Insurance discounts may be available through participating providers based on location and carrier.
- Your app will get alerts when the system detects freezing conditions so you can winterize appropriately to protect your home.
- Smart home Technology- Works with Amazon Alexa, Google Assistant, Ring, Alarm.com and ELAN.
- One-year limited warranty to cover manufacturer defects.

CONS

- For the system to work correctly- it does require initial app set up for your smart phone
- Added costs up front for device
- If not programmed correctly- can cause unwanted water shut off

OPTIONAL BIDET SEAT –
UPGRADE- ADDED COSTS: $410.00

KOHLER PURE WASH E545 BIDET TOILET SEAT OPTION

- Hybrid heater provides continuously heated water for consistent comfort
- LED lighting illuminates the bowl to serve as a nightlight
- Heated seat with five temperature settings
- Front and rear wash modes provide warm water for cleansing
- Adjustable water temperature and water pressure
- Side-mounted control panel is accessible and easy to use
- Self-cleaning function uses UV light to automatically clean the wand surfaces
- Quiet-Close™ elongated lid and seat prevents slamming
- Quick-Release™ functionality allows seat to be removed easily from toilet for convenient cleaning
- Fits most elongated toilets

16.0 PLUMBING – HALL SHOWER UPGRADE OPTIONS

SHOWER PAN WITH TILE WALLS

FF03460

UPGRADE: Add $4,670.00

Includes pan insert, tile walls, one niche or set of corner shelves, one 36” grab bar, and clear glass by-pass sliding door

TUB BASIN WITH TILE WALLS

Exibit 6032 Maax 105512

UPGRADE: Add $3,465.00

Includes tub base, tile walls, one niche or set of corner shelves, one 36” grab bar, Curved shower rod

UPGRADE: PACKAGE ADDED COSTS: $2,130.00

WALL OVEN &
